Object: "Construction of pedestrian access to the tourist site "The Old Bridge" and elements of the urban environment for recreation and tourism development" in LP 65677.701.9131 of the cadastral map of town Svilengrad

Part: Public works and Landscaping

EXPLANATORY NOTE

The territory under development is part of the green system of Svilengrad with an area of 4.9 decares. The terrain borders Maritsa River to the west and "Krajrechna" Street to the east.

The project envisages development of the terrain, construction of alley network and recreation areas. The aim of the project is to permanently improve the physical and ecological environment of the area, to renovate and reconstruct the space so that it is suitable for people of all ages as well as for disadvantaged people. The individual zones are structurally connected in a linear sequence, which is determined by the extraordinary character of the territory and determines the solution in a dendrological manner.

In the southeastern part of the terrain there are existing tree species, which are in very good sanitary condition. No cutting or removal of species is required.

The woody vegetation that enters the boundaries of the site is well preserved and will be used.

The project involves planting deciduous and coniferous trees and decorative shrubs. Parallel to the alley in the eastern part of the park is designed a hedge, which goes northwards to the border with the object "Krayrechna". Climbing plant species are provided for the pergolas of the recreation site.

Benches are designed along the driveway. To ensure the comfort of the seated, decorative vegetation is provided as the "back" of the seating places.

The newly designed vegetation has a rich and varied species composition, consistent with the specific conditions of the site and the region. The species are detailed in the attached dendrological nomenclature and the planting sites are shown and specified in the planting drawing.

Distances for planting of decorative species:

- deciduous trees in groups - broad-walled to 4.0 m and low-spaced 1.5 m apart;
- coniferous trees - broadly crooked at 2,5 to 3,0 m and narrow crown - 1,0 to 1,5 m distance from each other;
- high shrubs - staggered, 0.8 m distance from each other;

- deciduous shrubs - staggered, 0.6 m distance from each other;
- low evergreen shrubs - staggered 0.5 m distance from each other;
- hedgehog - in a ditch in two rows - 5 pieces per meter.
- climbing species - 1.5 m distance from each other;

It is envisaged that planting be done in holes as follows:

- for large-sized tree species - 0,7 / 0,7 / 0,7 m;
- for medium sized tree species - 0,6 / 0,6 / 0,7 m;
- two-row hedge is planted in a ditch with width 0,6 m and depth of 0,4 m.
- for high shrub species - 0,5 / 0,5 / 0,5 m;
- for low shrub and climbing species - 0,4 / 0,4 / 0,4 m;

Grassing

The grassing of all areas not occupied by permanent vegetation shall be carried out after the completion of the planting works. The areas planted for grassing are pre-packed with humus soil in a layer of at least 20 cm. Grass seed is sown at a rate of 30kg/ha. For sowing, multi-component grass mixtures are used, taking into account the nature of the soil and the purpose of the area.

03.2018 year.
